

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning at page 7, line 6, as follows:

For example, to determine whether or not to switch the mode, the digits number counting section 21 counts the number of digits in a destination telephone number and the mode switching determination section 22 uses as a threshold value a numerical value smaller than the number of digits in the destination telephone number. For example, the threshold value for input digits is set at two to allow only two digits to be displayed. The display section in a copy mode, showing that only two digits are displayable, is shown in Fig. 4. Similarly, a display section in a facsimile mode, where the capacity of the display section is set to display a facsimile phone number is shown in Fig. 5. In this case, even if an entry is made three times, only two digits are displayed with only the input order of the digits changed. It can thus be reliably determined whether the operator's entry indicates a sheets number setting for copying or a telephone number for facsimile transmission.
